

3100 Reel Auggie & Commercial Reel Mixers

We are very excited to introduce to you our New Generation of hay processing Reel mixers with the following key design changes to improve performance:

FEATURE	BENEFIT
 <p>Roughage Auger (3125 - 3195)</p>	<p>Roughage Auger (3125 - 3195)</p> <ul style="list-style-type: none"> ■ Designed for rations with a higher hay content and improves ration quality by processing hay to a more uniform length. ■ <u>Weld-in, hardened knives</u>¹ improve hay processing and are self-sharpening for longer life. ■ <u>Relaxed notches</u>² on lower auger reduce spike load for lower horsepower during hay processing.
 <p>Grain Auger (3150 - 3195)</p>	<p>Grain Auger (3150 - 3195)</p> <ul style="list-style-type: none"> ■ Designed for rations with higher grain content and maintains ration quality by gentle handling of feed like flaked corn. ■ <u>Holes</u>³ are available to add round knives when processing minimal amounts of hay in finishing rations for ration flexibility. ■ <u>Standard notched</u>⁴ augers help draw material into the auger for superior mixing and processing of small quantities of hay into the ration.
 <p>Roughage Maxx Auger (3125 - 3195)</p>	<p>Roughage Maxx Auger (3125 - 3195)</p> <ul style="list-style-type: none"> ■ The Roughage Maxx option is used in conjunction with the Roughage Auger to maximize efficient hay processing when incorporating up to 20% good quality hay. ■ <u>Bolt-on scallop knives</u>⁵ are removable and replaceable to provide flexibility to change the amount of processing in different rations. ■ The Roughage Maxx works best with the patented HayMaxx System and will help provide a more uniform ration.

The New Generation of Reel mixers has been designed to improve performance based on comments from our dealers and end customers. Our first goal was to provide a shorter more consistent hay particle length in rations when processing higher amounts of hay. This provides a more uniform TMR mix to prevent cows from sorting feed. Our second goal was to maintain ration quality in high grain applications. We feel this New Generation of Reel mixers is now more specifically designed to meet the needs of the beef and dairy producers across the country.

AVAILABILITY

All 3100 Series Reel Mixers will be available by December 2003
