Introducing KUHN MM 701, 1101 and 1301 Merge Maxx® Hay Mergers

Kuhn North America, Inc. is excited to introduce the KUHN MM 701, 1101 and 1301 Merge Maxx hay mergers. These mergers have been designed to fit the needs of medium to large dairy and commercial hay operations. These machines offer pickup widths of 24', 36' and 42' and complement the 30' pickup of the existing MM 890 in our commercial merger lineup. MM 01 Series hay mergers are unique in the industry and unmatched in their simplicity of operation, durability and merging capabilities.

The MM 01 Series builds upon the previous generation of KUHN mergers starting with the pickup. High-capacity pickups with integrated frames treat crop gently yet have been built and tested for extreme usage. The proven split bearing design with wear guards and anti-wrap discs decreases time needed for regular maintenance and improves pickup reliability. The floating windguard eliminates the need for operators to make adjustments when merging different crops or cuttings. KUHN's crop netting greatly limits leaf loss when transitioning onto the belt and into the windrow.

Mainframes and wing arms on each merger model have been updated to allow for the most intense usage in the field. KUHN has also added new hydraulic system upgrades for greater machine capacity.

All KUHN's 01 Series twin and triple merger models now include easy to use technology and software. The IntelliMerge™ system allows an operator to run, adjust, and receive machine diagnostics and feedback on an intuitive color display. The OptiSense™ belt stall system (optional on the MM 701) alerts the operator to when the belts start to slow down when approaching the capacity of the merger. All functions of the machine including the OptiSense belt stall detection system are controlled from the ISOBUS terminal from the comfort of the cab. ISOBUS compatibility, an industry exclusive, is standard on all KUHN twin and triple hay mergers.

Kuhn North America, Inc., of Brodhead, Wisconsin, is a leading innovator in agricultural and industrial equipment. KUHN offers a broad range of hay and forage, livestock, and crop production tools, as well as landscape and road maintenance equipment. KUHN, KUHN Knight and KUHN Krause products are sold by farm equipment dealers throughout the United States, Canada and many other countries.
