### **KUHN GA 8731+ and GA 9531+ Twin-Rotor Rotary Rake**

The redefined GA 8731+ and GA 9531+ twin-rotor, center-delivery rotary rakes are built on the popularity of the prior generation of KUHN's twin-rotor rotary rakes with the incorporation of the Masterdrive® GIII double-reduction gearbox.

The main gearbox features the KUHN exclusive double-reduction drive that not only provides consistent windrow formation in varying crop conditions, but also improves the power flow through the gearbox. These models have a lighter, but stronger construction with aluminum rake arm housings, large cam bearings and cam track designed to reduce peak loads.

Double-curved tine arms are designed to form fluffy and straight windrows for superior raking quality at high speeds. Fluffy windrows allow more air movement through the crop promoting fast and uniform drying! The GA 8731+ has fixed tine arms. For operations where transport height is a concern, the GA 9531+ has easily removable tine arms that can be stored on the hitch to achieve a transport height of 12'4" (3.8 m) when folded up in transportation mode.

Four wheels on each rotor are positioned close to the tines and 3D suspension allows superior ground adaptation of the rotors on the GA 8731+ for better raking. The four wheels also provide more stable operation in rough fields. For even more stability and greater ground adaptation, six wheels per rotor are standard on the GA 9531+. This feature also helps with crossing over pivot tracks.

The KGA 04C control box manages all the functions of the machine including optional equipment such as rotor working height adjustment, individual rotor lift, rotor lift at headlands, working and windrow width adjustments. Simplified folding and unfolding between transportation and field working positions is also controlled from the control box for operator convenience.

Kuhn North America, Inc., of Brodhead, Wisconsin, is a leading innovator in agricultural and industrial equipment. KUHN offers a broad range of hay and forage, livestock, and crop production tools, as well as landscape and road maintenance equipment. KUHN, KUHN Knight and KUHN Krause products are sold by farm equipment dealers throughout the United States, Canada and many other countries.
