KUHN Advance™ .1 Series Precision Fertilizer Spreaders

Kuhn North America, Inc. is pleased to announce the launch of the new KUHN Advance™ .1 Series precision fertilizer spreaders, engineered to deliver a powerful combination of precise application, high capacity and commercial grade durability. Designed specifically for row crop operations focused on managing input costs and maximizing yield potential, these trailed spreaders build on KUHN's proven technology to achieve highly accurate fertilizer placement under a wide range of field conditions.

The Advance .1 Series features KUHN's Coaxial Distribution Adjustment (CDA) and Electronic Mass Flow Control (EMC) technologies, working together to achieve up to 98% application accuracy by automatically adjusting for ground speed, rate and changing field conditions. This high level precision supports sustainable nutrient management and helps reduce input costs.

Additional automated systems, VariSpread Section Control and OptiPoint Pro Headland Control, enhance accuracy even further using GPS positioning and field shape data to automatically manage working width, outlet openings and switch on/off points. These technologies eliminate overlaps and gaps, ensuring precise product placement and accurate application rates across the entire field. To simplify operation, the spreaders are fully ISOBUS compatible and integrate seamlessly with existing precision systems to offer handsfree adjustments during complex applications.

Producers can choose between two specialized PowerPack systems: the Axis® PowerPack for high precision nutrient application or the Universal PowerPack for high volume materials such as lime. PowerPacks can be switched in as little as 10 minutes, allowing operators to quickly adapt to different application needs.

The KUHN Advance .1 Series delivers the versatility, durability and advanced technology producers need to optimize performance and protect their nutrient investment. These spreaders are now available through authorized KUHN dealers across North America. To locate a dealer or learn more about the Advance .1 Series, visit www.kuhn.com.

Kuhn North America, Inc., of Brodhead, Wisconsin, is a leading innovator in agricultural and industrial equipment. KUHN offers a broad range of hay and forage, livestock, and crop production tools, as well as landscape and road maintenance equipment. KUHN, KUHN Knight and KUHN Krause products are sold by farm equipment dealers throughout the United States, Canada and many other countries.
